# FLU SHOT Q&A

2016-2017

- \$0 Copay with Medicare.
- \$30 cash price.
- We can vaccinate anyone 14 years & older.
- Ask a friendly Cannon pharmacist if your plan covers you for a flu shot at no charge.

## Q: Why get vaccinated against the flu?

**A:** Influenza is a serious disease that can lead to hospitalization and sometimes even death. Every flu season is different, and influenza infection can affect people differently. Even healthy people can get very sick from the flu and spread it to others.

## Q: How do flu vaccines work?

**A:** Flu vaccines cause antibodies to develop in the body about two weeks after vaccination. These antibodies provide protection against infection with the viruses that are in the vaccine. The seasonal flu vaccine protects against the influenza viruses that research indicates will be most common during the upcoming season.

## Q: What kinds of flu vaccines are available?

**A:** Traditional flu vaccines (called trivalent vaccines) are made to protect against three flu viruses; an influenza A (H1 N1) virus, an influenza A (H3N2) virus, and an influenza B virus. In addition, this season, there are flu vaccines made to protect against four flu viruses (called "quadrivalent" vaccines). These vaccines protect against the same viruses as the trivalent vaccine as well as an additional B virus.

## Q: When should I get vaccinated?

**A:** Flu vaccination should begin soon after vaccine becomes available, ideally by October.

## Q: Does flu vaccine work right away?

**A:** No. It takes about two weeks after vaccination for antibodies to develop in the body and provide protection against influenza virus infection. That's why it's better to get vaccinated now, before the flu season really gets under way.

## Q: Why do I need a flu vaccine every year?

**A:** A flu vaccine is needed every season for two reasons. First, the body's immune response from vaccination declines over time, so an annual vaccine is needed for optimal protection. Second, because flu viruses are constantly changing, the formulation of the flu vaccine is reviewed each year and sometimes updated to keep up with changing flu viruses.

## Q: Who should get vaccinated this season?

**A:** Everyone who is at least 6 months of age should get a flu vaccine this season. Especially important for:

- People who are at high risk of developing serious complications, like pneumonia
- People who have certain medical conditions including asthma, diabetes, and chronic lung disease
- Pregnant women
- People younger than 5 years (and especially those younger than 2), and people 65 years and older
- People who live with or care for others who are at high risk of developing serious complications
- Household contacts and caregivers of people with infants younger than 6 months old, and those with certain medical conditions including asthma, diabetes, and chronic lung disease
- Health care personnel

## Q: Who should not be vaccinated?

**A:**

- Children younger than 6 months old
- If you are feeling ill with or without a fever
- If you have had a severe allergic reaction to the flu shot
- If you have a history of Guillain-Barre Syndrome

## Q: Can the flu vaccine give me the flu?

**A:** No, a flu vaccine cannot cause flu illness. According to the Centers for Disease Control (CDC), the flu vaccine is made from inactivated viruses that have been 'inactivated' and are therefore not infectious.

## Q: What insurance does Cannon Pharmacy accept & what is the flu vaccine copay?

**A:** Check with Cannon's friendly staff to find out specific coverage details. Traditional Medicare and Medicare Advantage Plans have a \$0 copay. Medicaid recipients must go through their doctor's office, local health department, or pay out of pocket.

## Q: Without insurance, what is the cash price?

**A:** \$30 cash price.

## Q: Does our flu shot contain preservatives?

**A:** No, our flu shot is preservative free.

# SEPTEMBER SPECIALS

**Your Choice**

### QUICK REFERENCE GUIDE FOR SENIORS 65+

- During a regular flu season, about 90% of flu-related deaths occur in people 65 years and older.
- Traditional Medicare and Medicare Advantage plans have \$0 copay.
- HD (High Dose) vaccine is a flu shot made only for those who are 65 and over. It contains 4 times the amount and therefore helps to provide a stronger immune response.

## INTRODUCING OUR NEWEST TEAM MEMBERS

**AMANDA BUCK**  
**COMMUNITY LIAISON**

### "Need help getting connected with helpful resources & supportive groups within our community?"

- I work directly with our Cannon pharmacists and staff to enhance your pharmacy experience.
- I can address any of your social needs to help improve your care at home.
- I can reach out to several of our local service partners and agencies.
- I can find resources to help make your home healthy and safe.
- I can provide supportive services via telephone and/or home visits.

**NIKIA MADDOX**  
**PATIENT ADVOCATE**

### "Need help getting your medicines paid for?"

- I work directly with prescription manufacturers to see if you qualify for a Patient Assistant Program (PAP) to get free medications.
- I work directly with government-funded programs who may give you grant money towards paying your copays.
- I can assist Medicare patients with applying for Prescription Assistance through Social Security.
